The Buy It Now button is only. Neither download manager is able to download the torrent file. download torrents and the like but. Now you can download the free file from our servers. Unfortunately, free torrents are not available for download.Q: How to make this query faster I have a table with about 250 million rows. I have the following SQL query: SELECT * FROM table WHERE id = 9 It works, but it takes about 30 seconds. When I turn on explain plan, it says "Hash Match (cost=17500.00..17500.00 rows=6 width=31)" and "Clustered Index Scan (cost=0.00..17500.00 rows=6 width=31)" What I need is the record with id=9 and all the other details of the row that matches. How can I modify the query to get this without taking 30 seconds? The SQL server version is 2008, the id column is of type bigint. A: You need a composite key. Add an ID column, or something like an IDENTITY() column, to this table and then add the composite key as: CREATE TABLE MyTable (ID int, Name nvarchar(100) NOT NULL, Primary Key(ID, Name)) Please note that you can't have a composite key (two columns) on the same table. You can however add a unique constraint. Also note that adding a composite key will make your queries faster in the future because now you are automatically ensuring that you're only accessing data from one row.
